OPTIMA BONEACTIVE

Bone & Joint Health Formula

400g Tin Can

Bone & Joint

Cardiac Support

ICU Nutrition

Features, Advantages & Benefits

✦ Key Features

High Bioavailable Calcium
536mg calcium per 100g (70% DV) with optimal calcium-to-phosphorus ratio for superior absorption.

Collagen Type II
Contains collagen to support joint health, cartilage integrity, and flexibility.

Complete Mineral Matrix
Magnesium (140% DV), Zinc, and Manganese for complete bone metabolism support.

Vitamin D3 Enhanced
13mcg Vitamin D (50% DV) for optimal calcium absorption and bone remodeling.

✔ Indications for Use

- ✔ **Osteoporosis & Bone Loss** - Enhanced calcium and mineral content for bone density
- ✔ **Osteoarthritis & Joint Disorders** - Collagen Type II for joint support and mobility
- ✔ **Post-Surgery & Fracture Recovery** - Accelerated bone healing and strength
- ✔ **Athletes & Active Lifestyle** - Support for joint mobility and flexibility

≡ Key Nutritional Facts (Per 100g)

Nutrient	Amount	% DV	Nutrient	Amount	% DV
Calories	450	-	Dietary Fiber	22g	79%
Total Fat	17g	22%	Vitamin D	13mcg	50%
Protein	22g	44%	Calcium	536mg	70%
Total Carbs	52g	19%	Magnesium	367mg	140%

Clinical Evidence & Research

UC-II Collagen Study for Joint Health

Clinical Research Supporting Optima BoneActive Formula

Clinical Study Summary: Effect of Collagen Type II on Joint Function

Background: Optima BoneActive incorporates Collagen Type II as a key ingredient, which has been clinically studied for its beneficial effects on joint health and mobility. Combined with high bioavailable calcium, magnesium, and vitamin D3, it provides comprehensive bone and joint support.

Key Findings: Clinical research demonstrates that undenatured Type II Collagen (UC-II) supplementation can significantly reduce joint discomfort and improve mobility in patients with osteoarthritis and joint disorders.

Mechanism of Action: UC-II works through oral tolerance, helping to regulate the immune response that contributes to joint cartilage breakdown. Combined with the mineral matrix in Optima BoneActive, it supports both bone structure and joint function.

Clinical Implications: The unique formulation of Optima BoneActive provides a comprehensive approach to musculoskeletal health:

- Supports bone density and prevents bone loss
- Improves joint flexibility and reduces discomfort
